Unleash Your Health Data with GIS

Every health and human services organization has collected vast amounts of data throughout the years, storing it away in clearinghouses and data centers. So much of that data is rich with valuable information needing to be organized and shared in a meaningful way. GIS can help you unleash the power hidden deep within your data.

ArcGIS Online helps you to extend your data and allows you to organize and share information internally, across departments, and all across your agency. You can keep your protected information private and secure behind your firewall and you can define what is safe to push out externally to others. You never lose control or ownership of your data. When you share outside of your organization, you drive innovation by giving the community and developers the opportunity to create new and important uses from the data.

Whether you are new to GIS or a longtime user, Esri technology will propel your open data initiatives forward.

New to Esri GIS?

ArcGIS provides you ready to use maps and applications and will have you quickly making and sharing maps across your organization. Included are base maps, imagery, rich demographic data, and ready to use web templates. Additionally, Esri Maps for Office, helps you to make maps right in Microsoft Excel giving your workforce the ability to make maps in a tool they are accustomed to using.

Already using Esri online technology?

Make sure you are utilizing the full potential of ArcGIS Online. Employing the additional enhancements available such as location analytics, provides additional ways to view and

enhance your tabular data through downloadable plugs-ins for your business intelligence systems. Additionally, templates, maps, dashboards, and story maps are downloadable as ready to use apps or configurable apps and can help you to share your story across blogs, twitter, and other social media.
