

Esri Service Packages

High-Impact, Cost-Effective Consulting Services

Capacity Planning

System Recommendations Based on Your Workflows and Usage

Esri's Capacity Planning services package provides you with access to an Esri enterprise consultant who will review your current and anticipated services, workflows, data sources, user workload, and application architecture to calculate the future server capacity needs for an ArcGIS Server site.

With Esri's support, you'll

- Understand your infrastructure and licensing requirements before deploying ArcGIS Enterprise.
- Optimize your implementation of the ArcGIS platform for current and anticipated use.

- Review your input through emails, calls, and webcasts.
- Apply our capacity planning methodology using tools designed by Esri.
- Determine system requirements based on our best practices.
- Receive a report detailing the anticipated workload, server hardware, and network capacities needed to support your future capacity.
