

Local and Regional Flood Inundation Mapping

Presented by David R. Maidment
Center for Water and Environment
University of Texas at Austin

Presentation for GIS Hydro Workshop, ESRI International User Conference, 8 July 2019, San Diego CA

Acknowledgements: National Weather Service, Texas Division of Emergency Management, Austin Fire Department, Kisters, ESRI, Harry Evans, Xing Zheng, David Arctur, and Christine Thies.

Flood Inundation Mapping

A journey over the last four years...

**If you want to go fast, go alone ...
... If you want to far, go together**

African Proverb

FEMA floodplain mapping in Texas

Large areas of Texas
lack flood information

FEMA maps are static
for 100 or 500 year flood

Flood emergency response needs a **new kind of map** that covers all of Texas and supports:

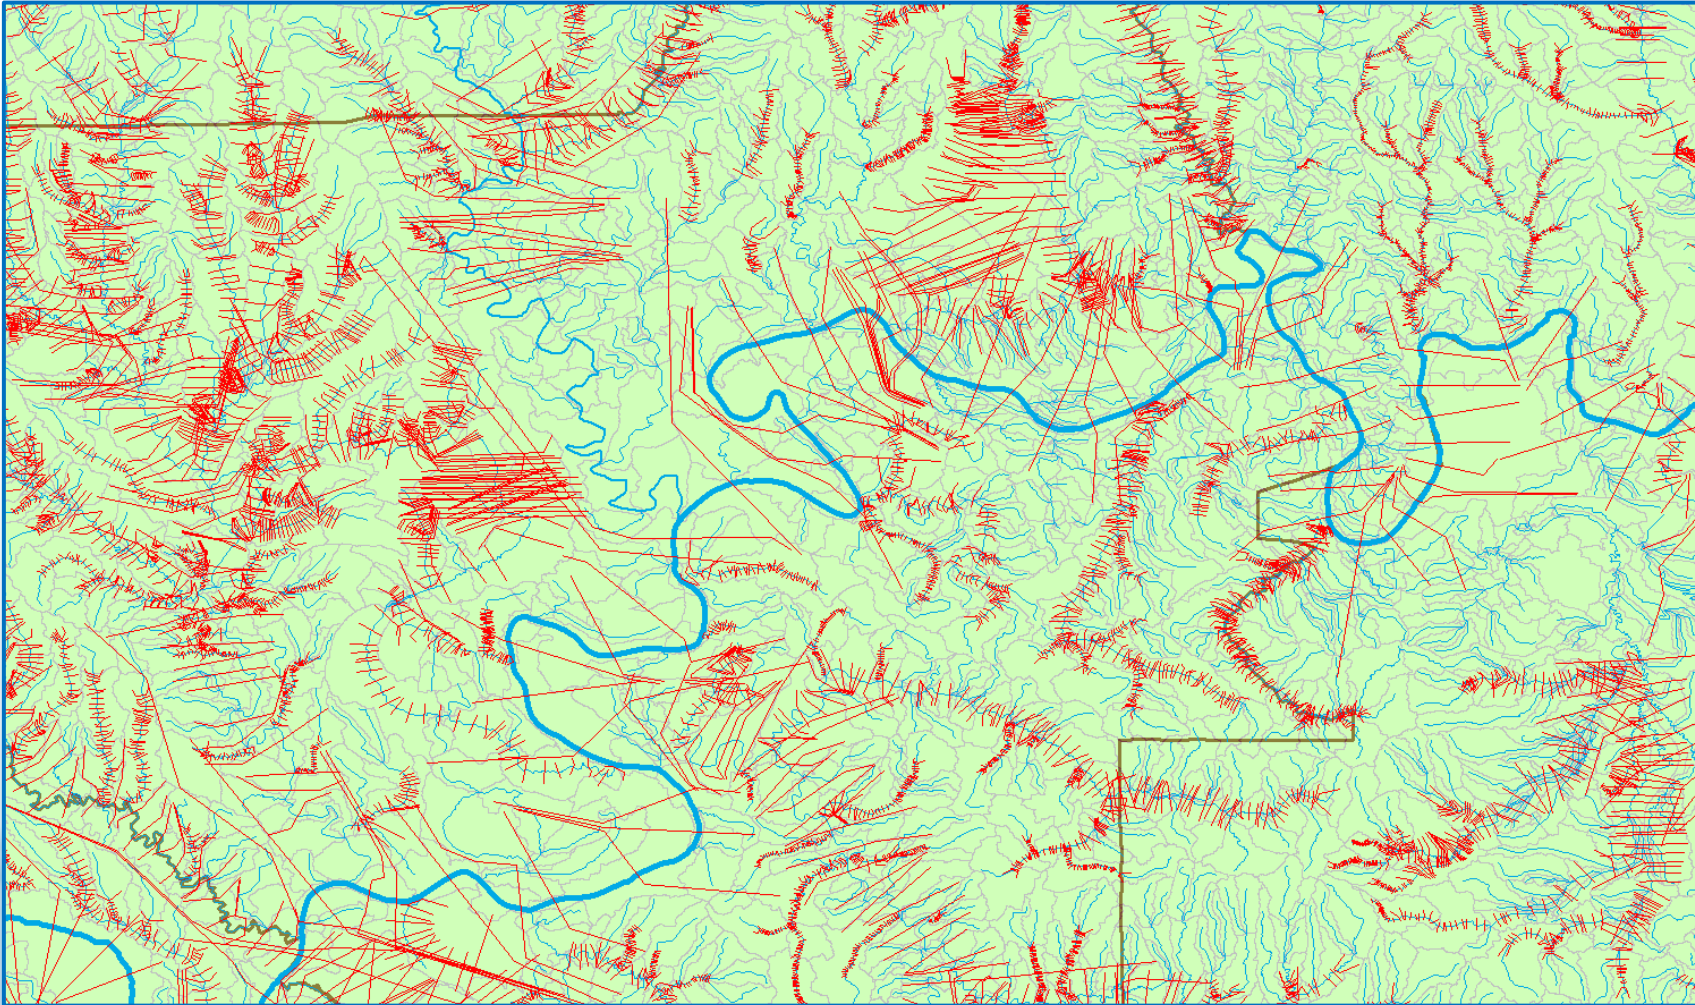

- Observational mapping by emergency responders
- Predictive mapping from flood forecasts

Flood emergency response is dynamic

Conclusions

- **Height Above Nearest Drainage (HAND) method is a fundamental innovation for local and regional flood inundation mapping**
- **Good results during Hurricane Harvey**
- **Useful for local inundation mapping, especially when used with LIDAR**
- **At local scale the road system and stream system need to be considered in 3D**
